

# **Unified Data Platforms and the Rise of Data Platform Engineering**

**Dagster as the Unified  
Control Plane for your  
Data Platform**

Day 1

# Dagster as the Unified Control Plane for your Data Platform

**Every company has a  
data platform**

# It's the systems and tools that produce data

# Your Data Platform

Context-specific

Costly: time, money, and energy

Foundational: operations, decisions, AI

Our mission is to empower  
every organization to build  
a productive, scalable  
data platform.

**Data-platform  
orientation is  
spreading**

**Formal job  
titles and org  
structures**

**Dagster is the  
natural tool of  
choice**

**Unified Control Plane for  
your Data Platform**

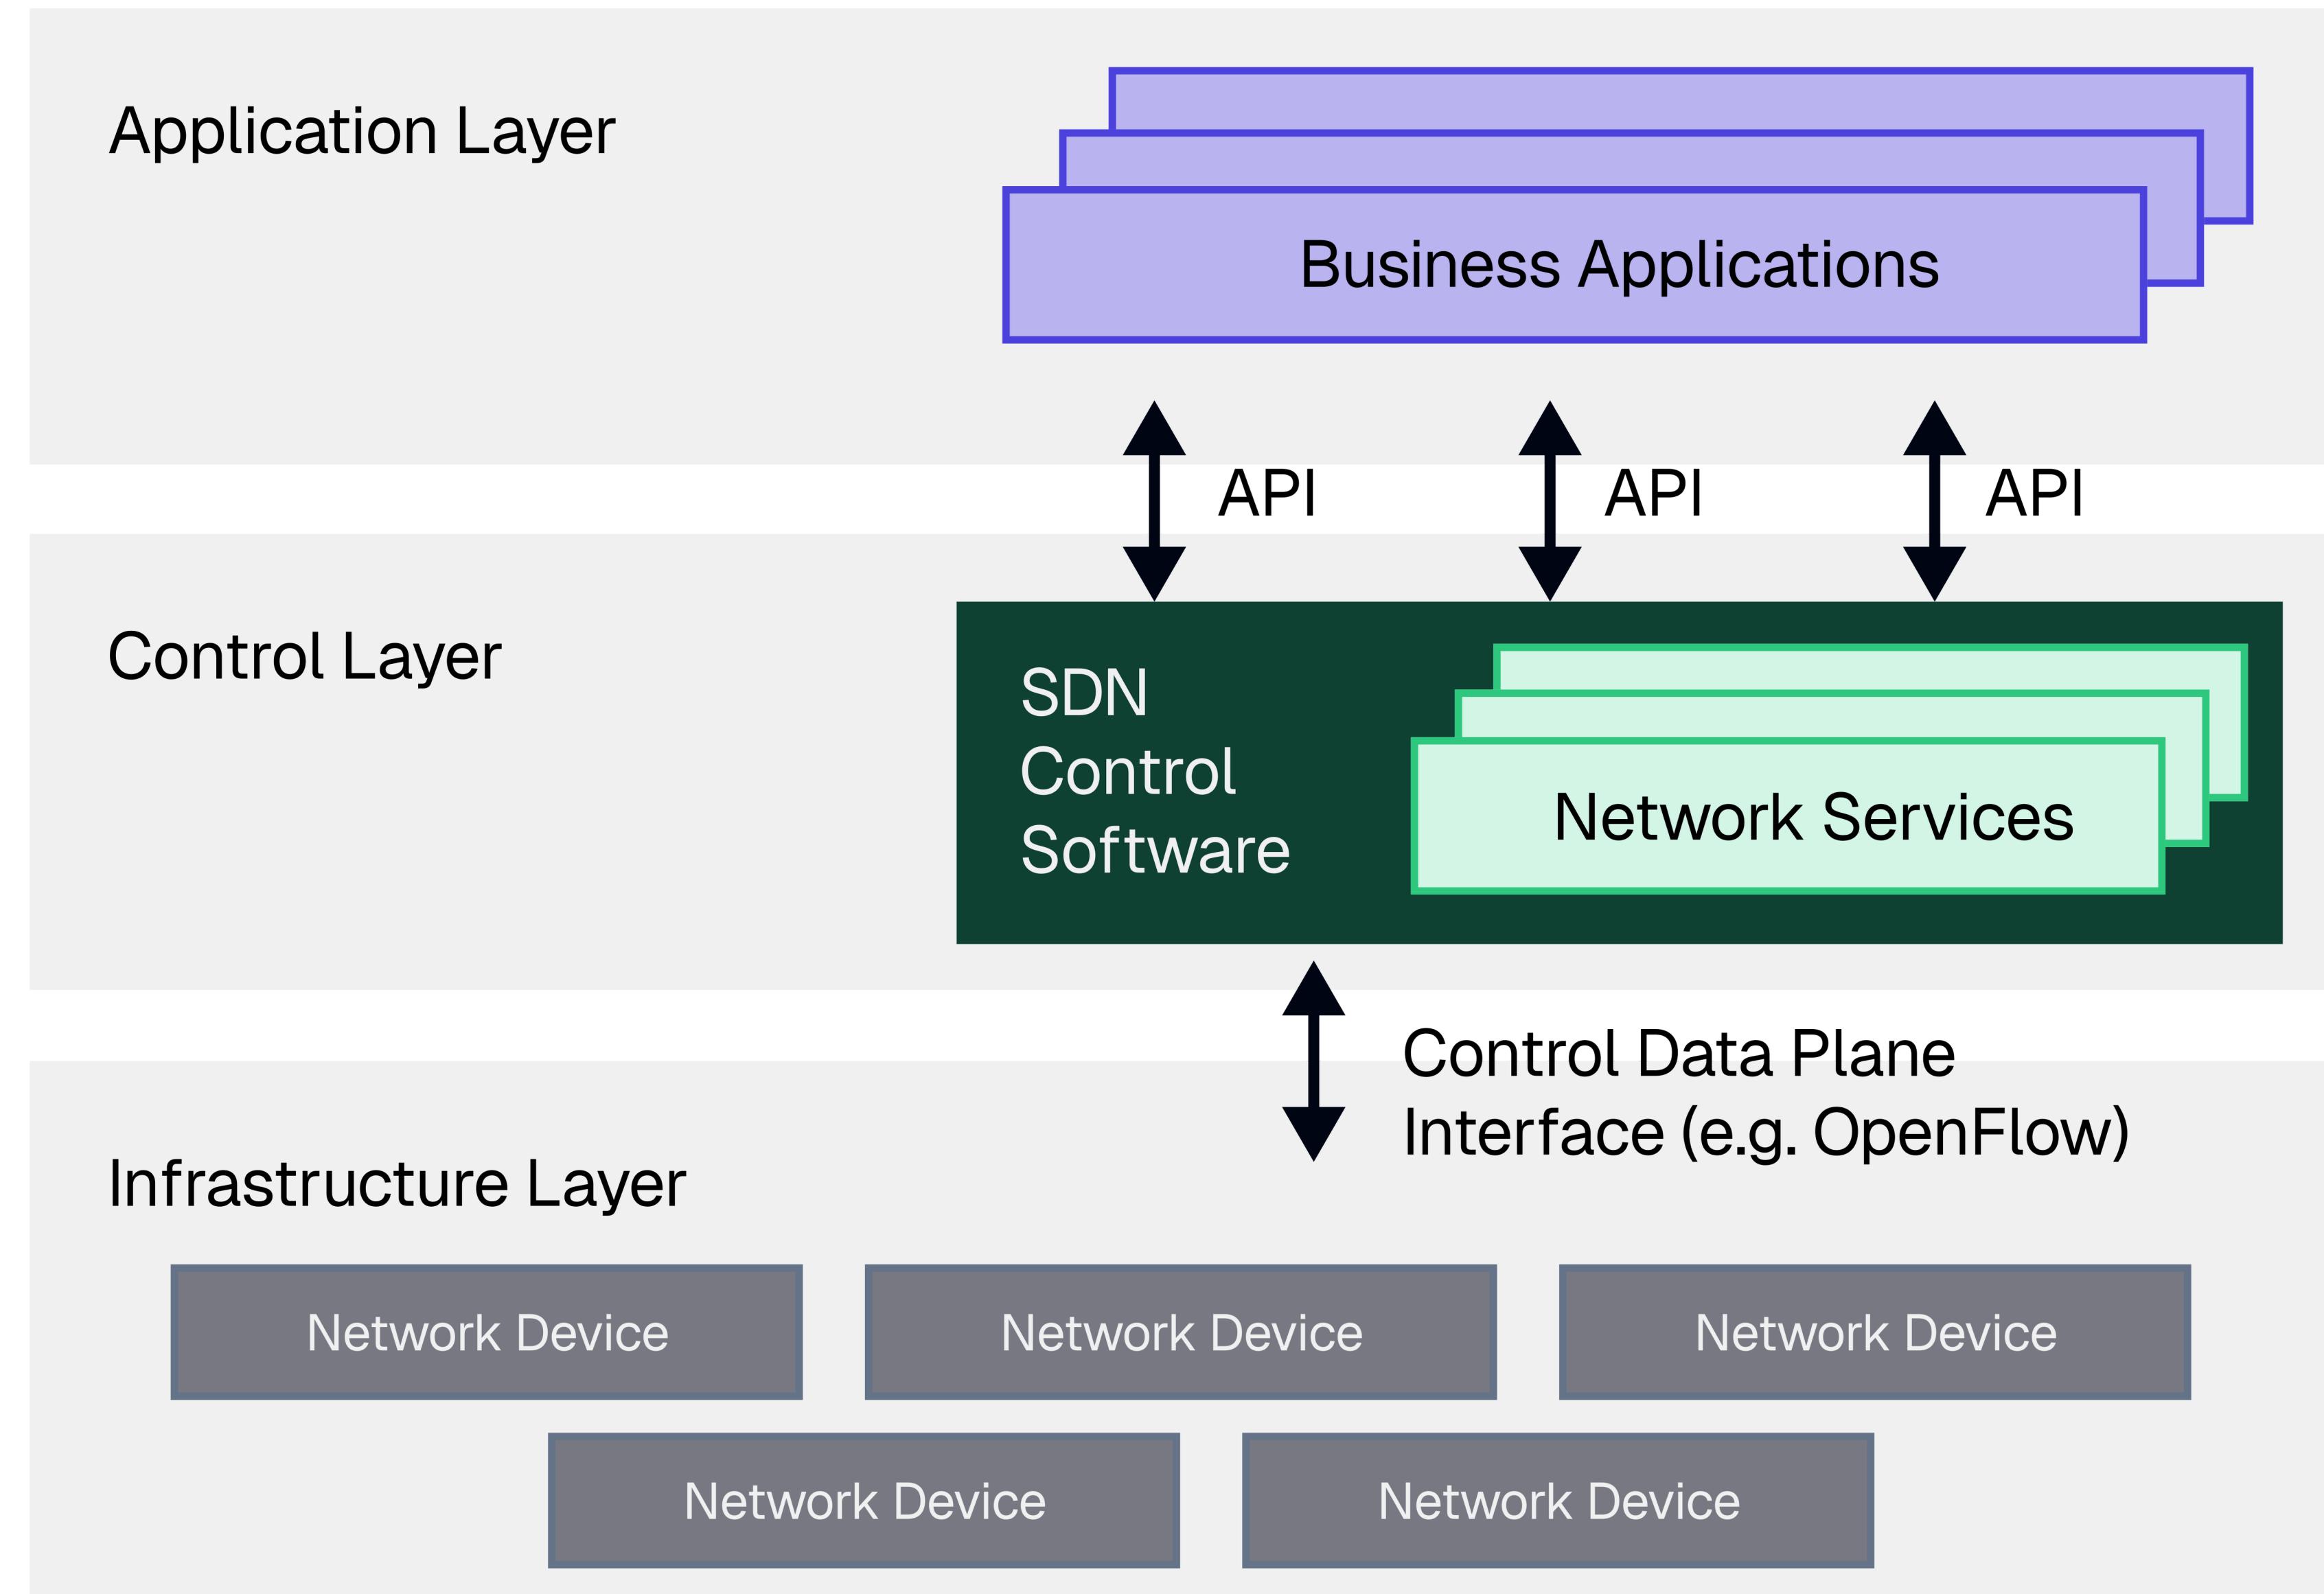

**Unified Control Plane for  
your Data Platform**

**Control planes exist  
in many domains**

**What does control  
plane even mean?**

# What do the LLMs say?

“... responsible for making decisions about how to handle data or resources”

“In modern network architectures like Software-Defined Networking (SDN), the control plane is often decoupled from the hardware and centralized, allowing for more flexible and programmable network management.”

Message ChatGPT

# Let's adapt it to data platforms

“... responsible for **orchestrating** data or resources”

“In modern **data platforms**, the **control plane** is often decoupled from **data processing** and **centralized**, allowing for more **flexible** and **programmable** **data management**.”

# The Control Plane

# The Control Plane

An Orchestrator

Programmable

Flexible

Centralized

# An Orchestrator

# An Orchestrator

Decides when to run computations, in what order, and with what configuration

Asset-oriented: Defines, in software, the assets that should exist.

Better user experience and a reliable system of record

**Flexible and  
Programmable**

# Flexible and Programmable

 Any tool

 Used by any practitioner

 Deployed to any infrastructure

Without the right abstractions

**You don't get enough richness and value**

---

Without programmability

**You cannot handle the complexity**

---

Without flexibility

**You cannot cover all use cases and contexts**

**Unified Control Plane for  
your Data Platform**

**Unified Control Plane for**  
**your Data Platform**

## Data Practitioners

# Autonomy

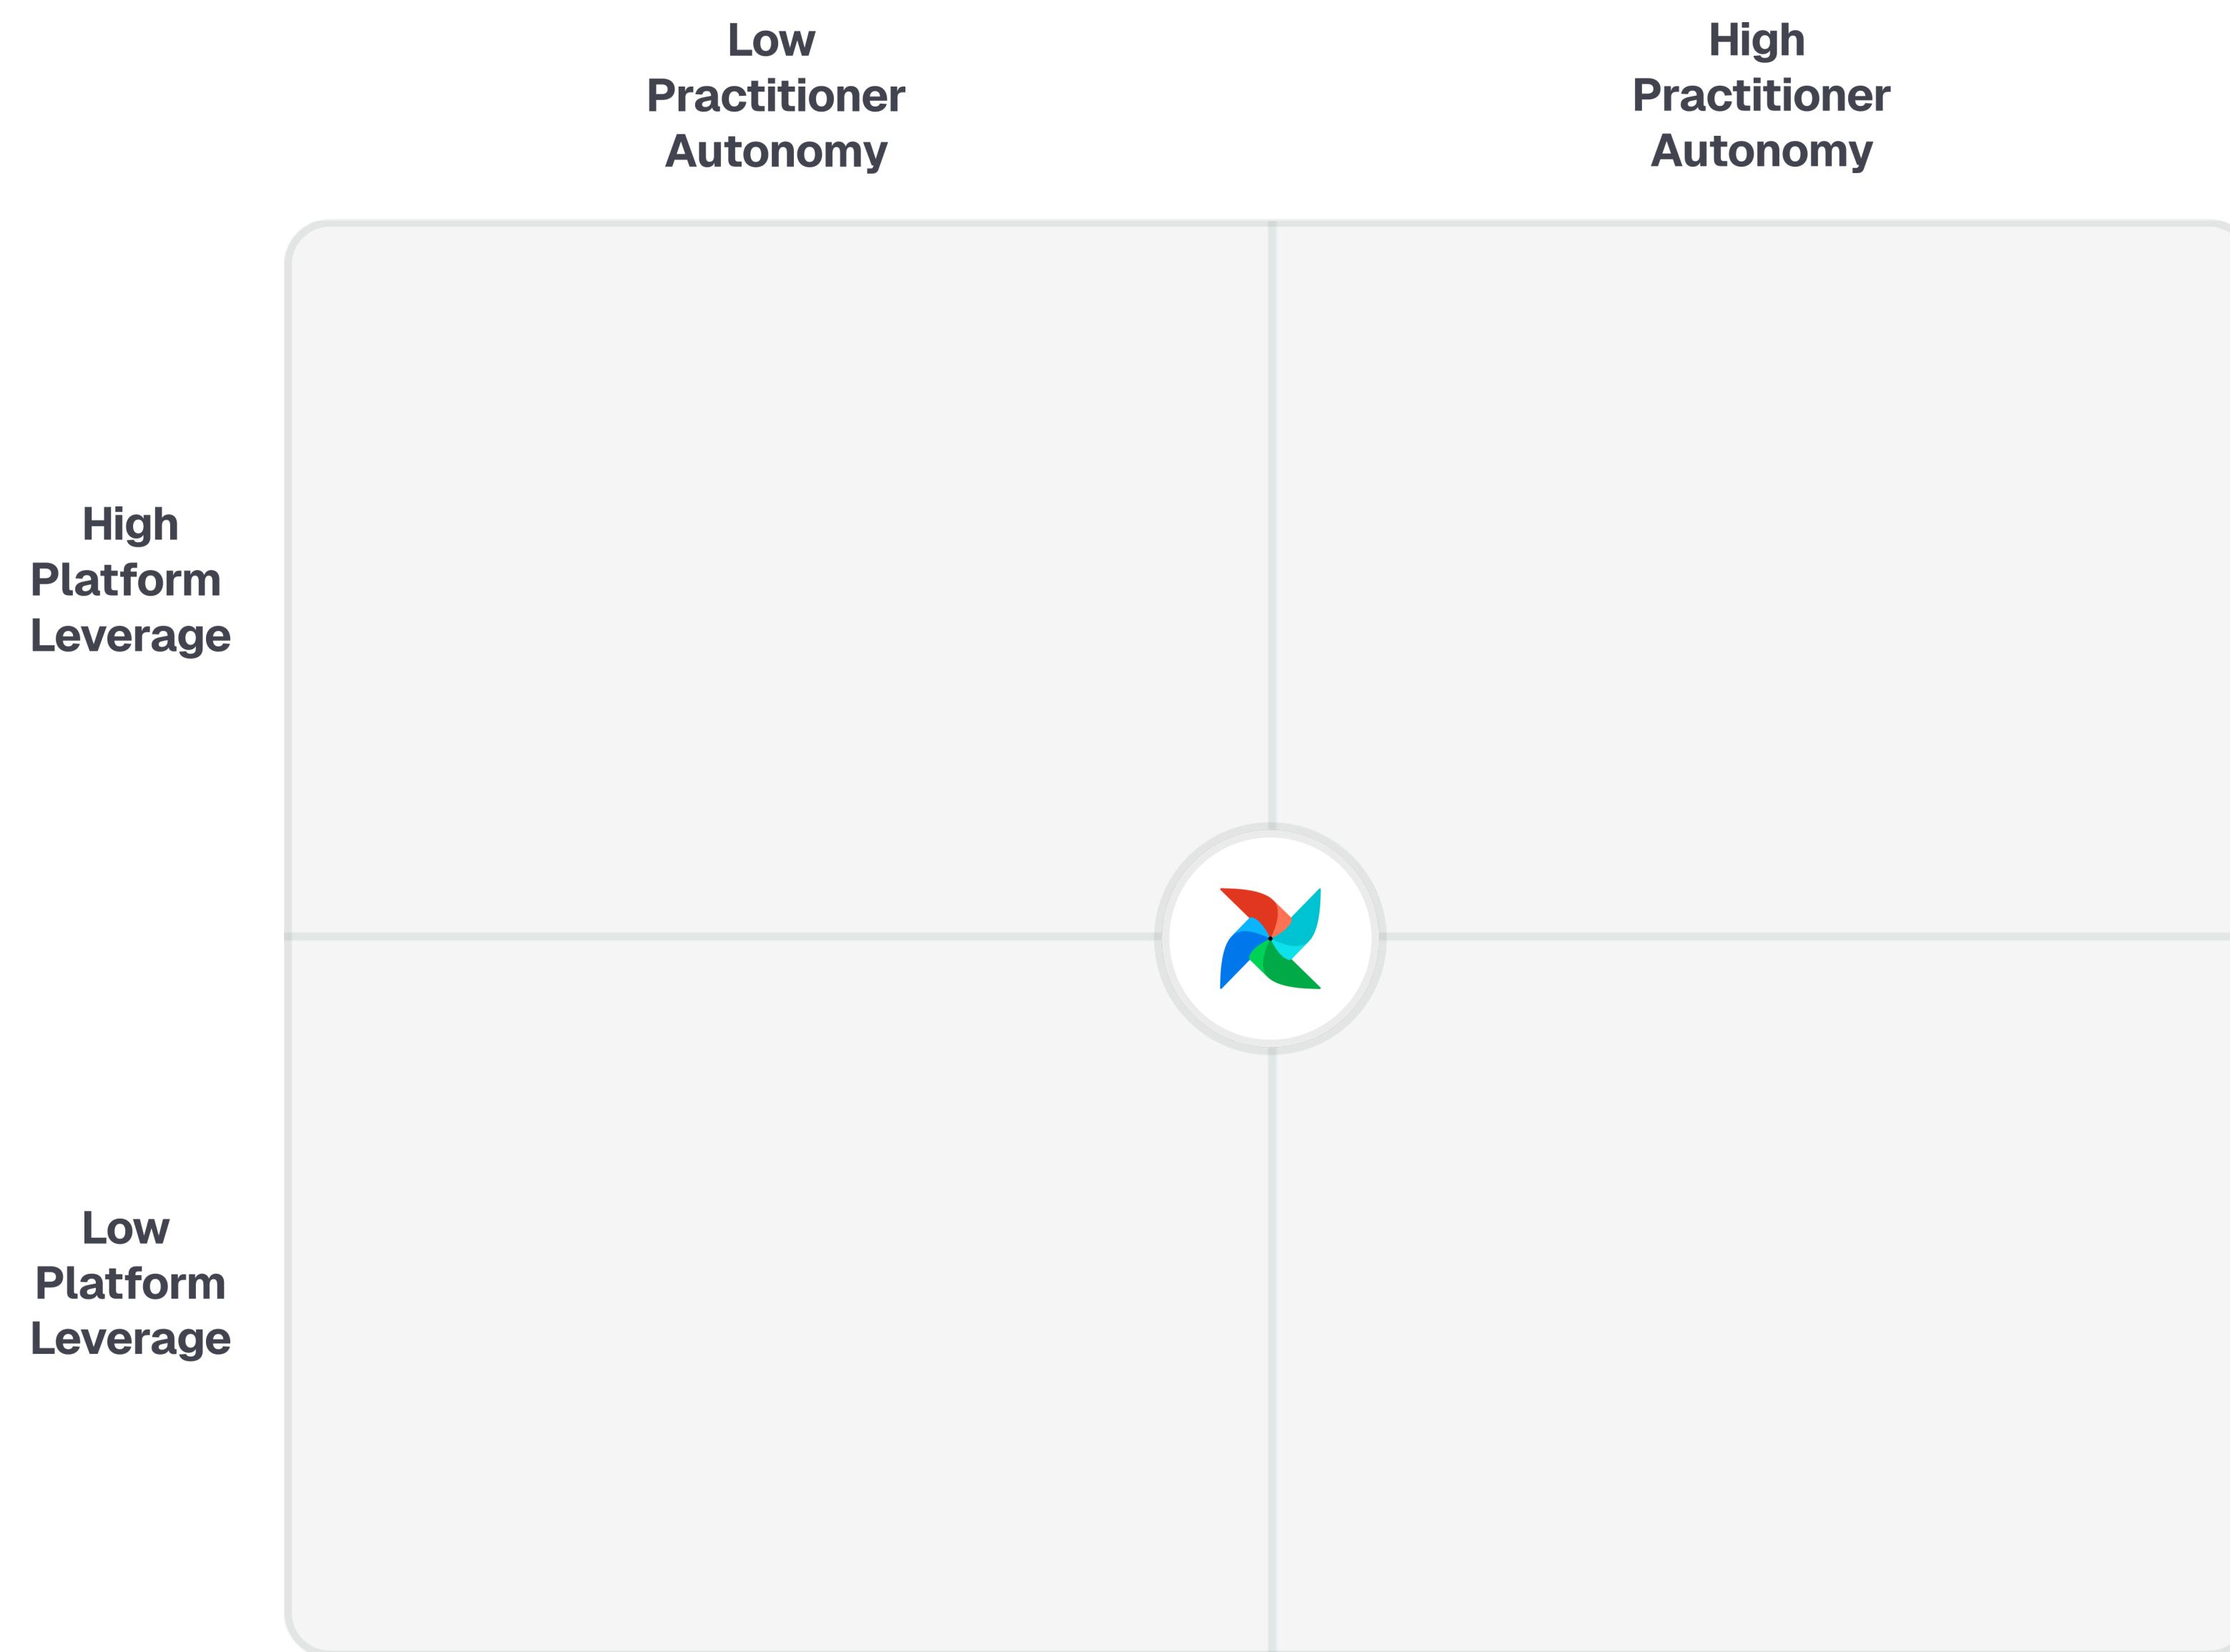

- ☝ Focus on business logic in tool of choice
- ⇄ Self-serve their pipelines in a productive SDLC
- 👤 Work as close to their business stakeholders as possible

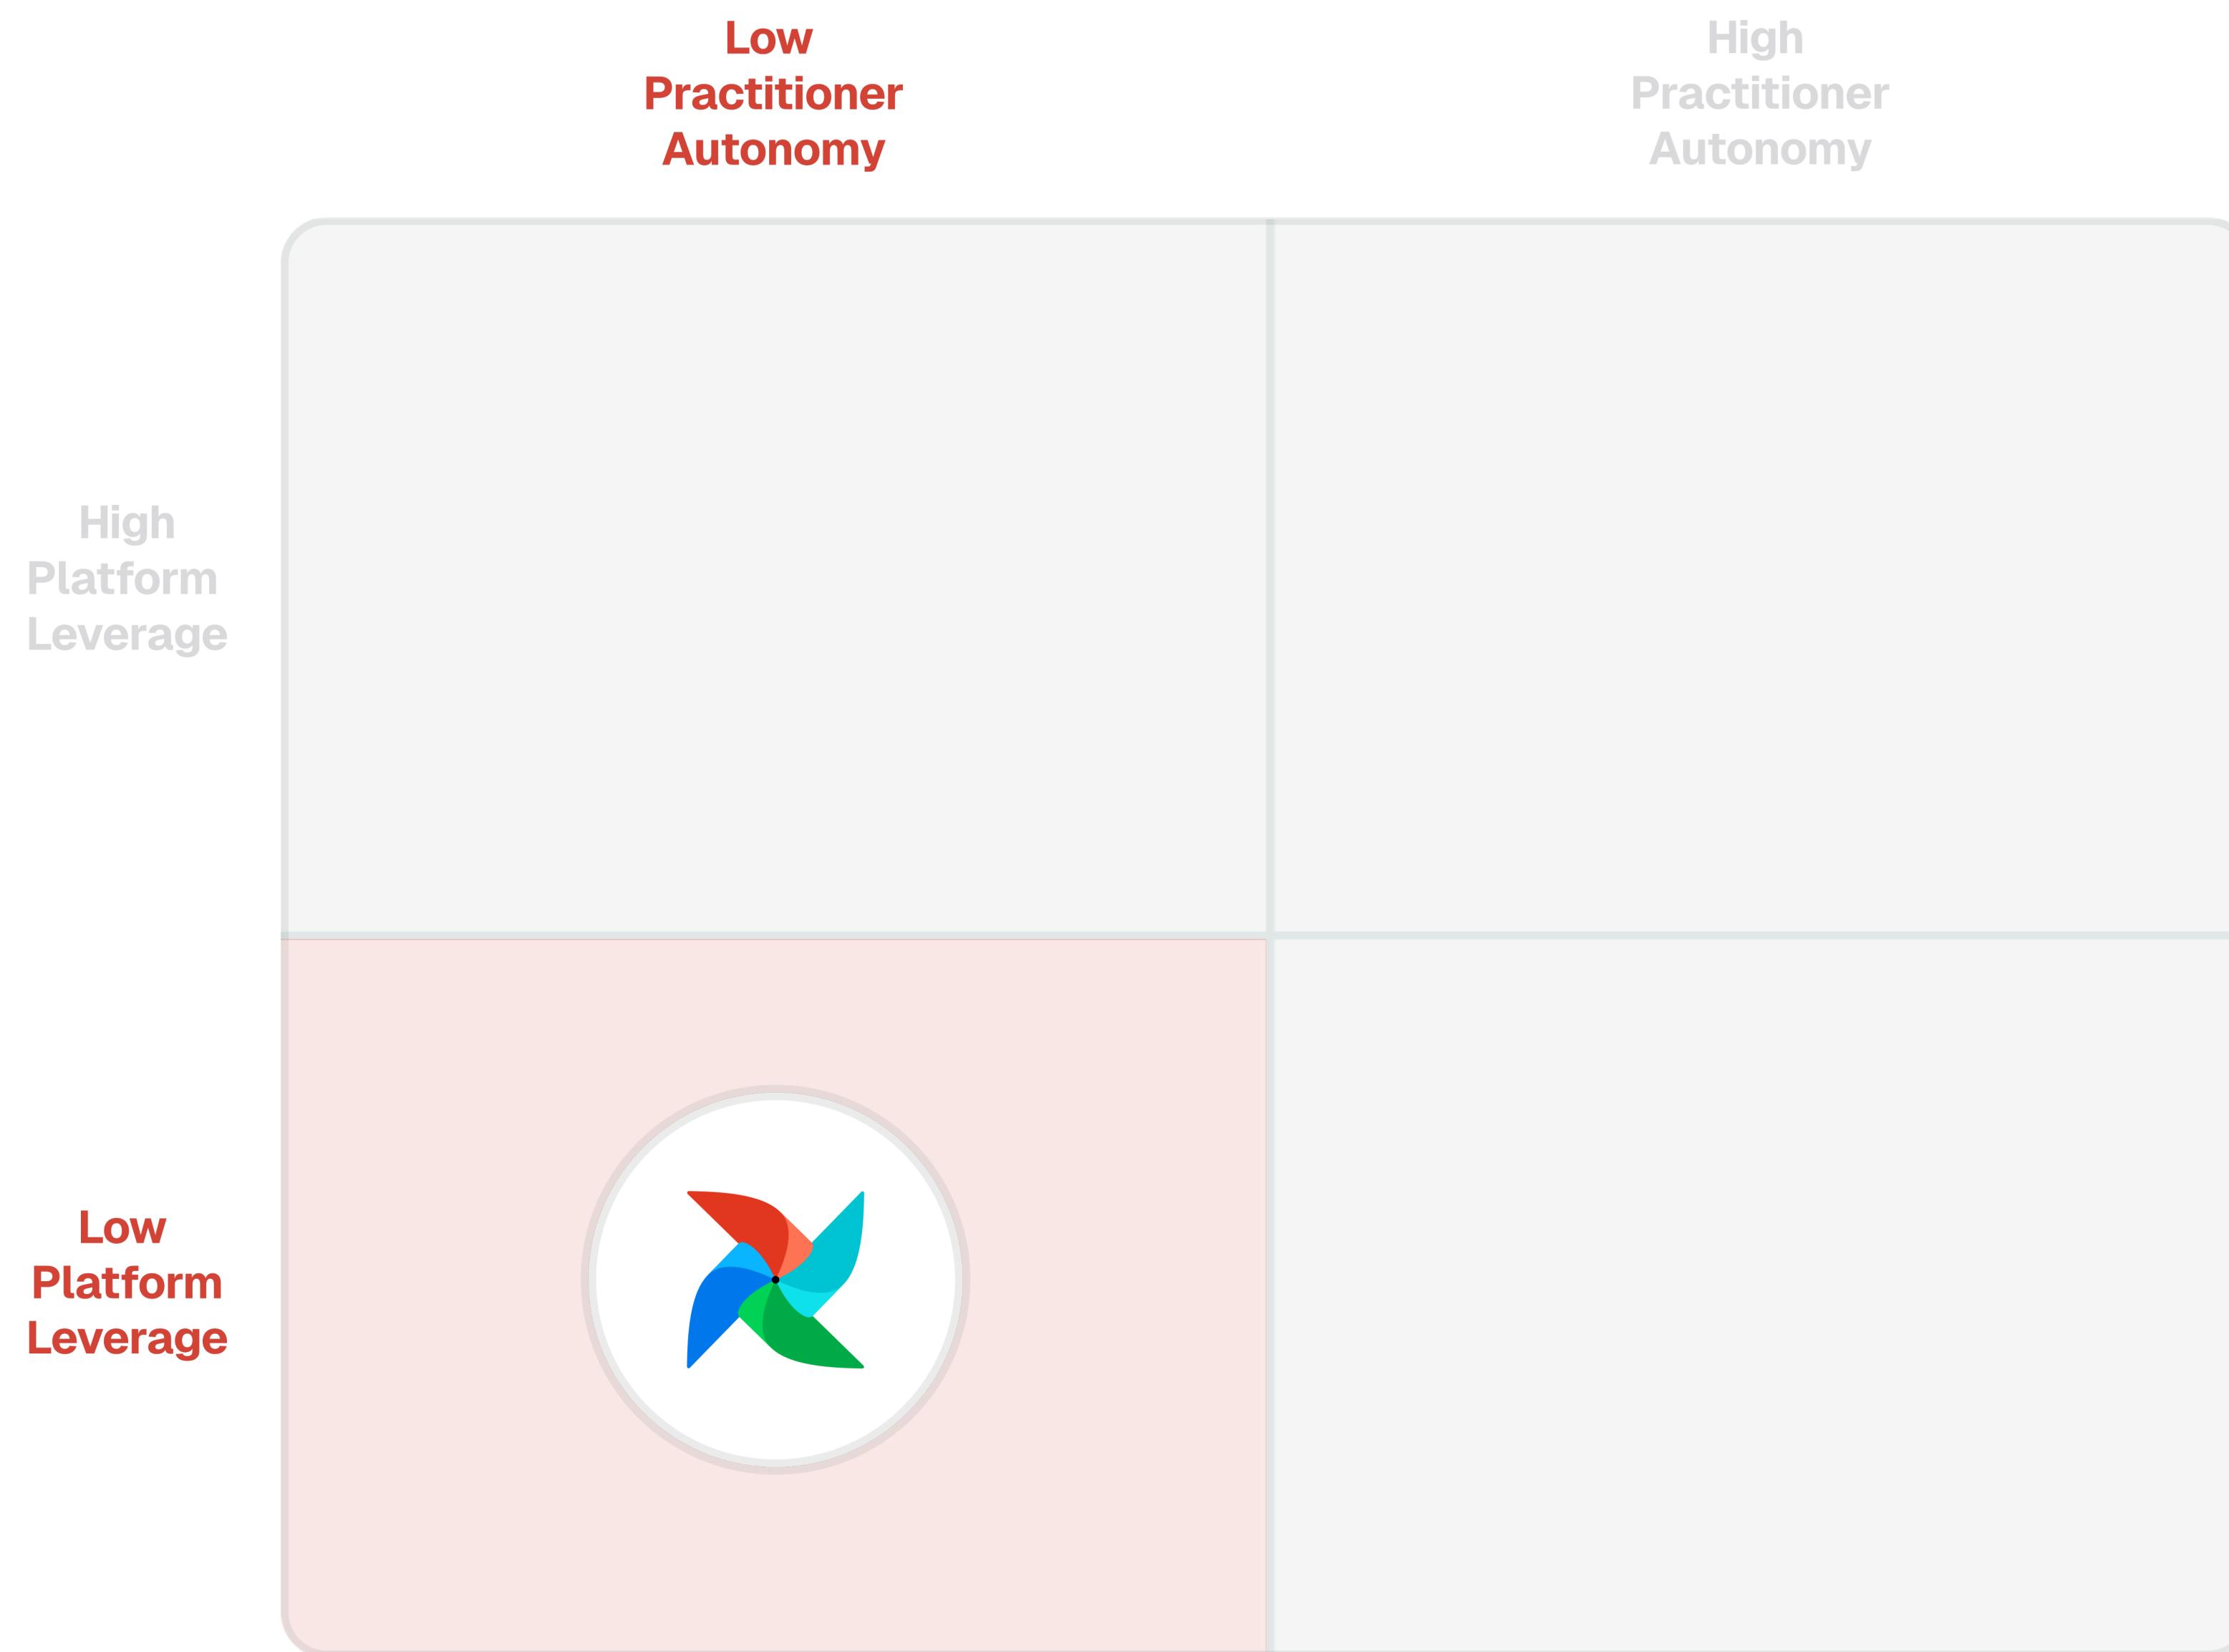

## Data Platform Team

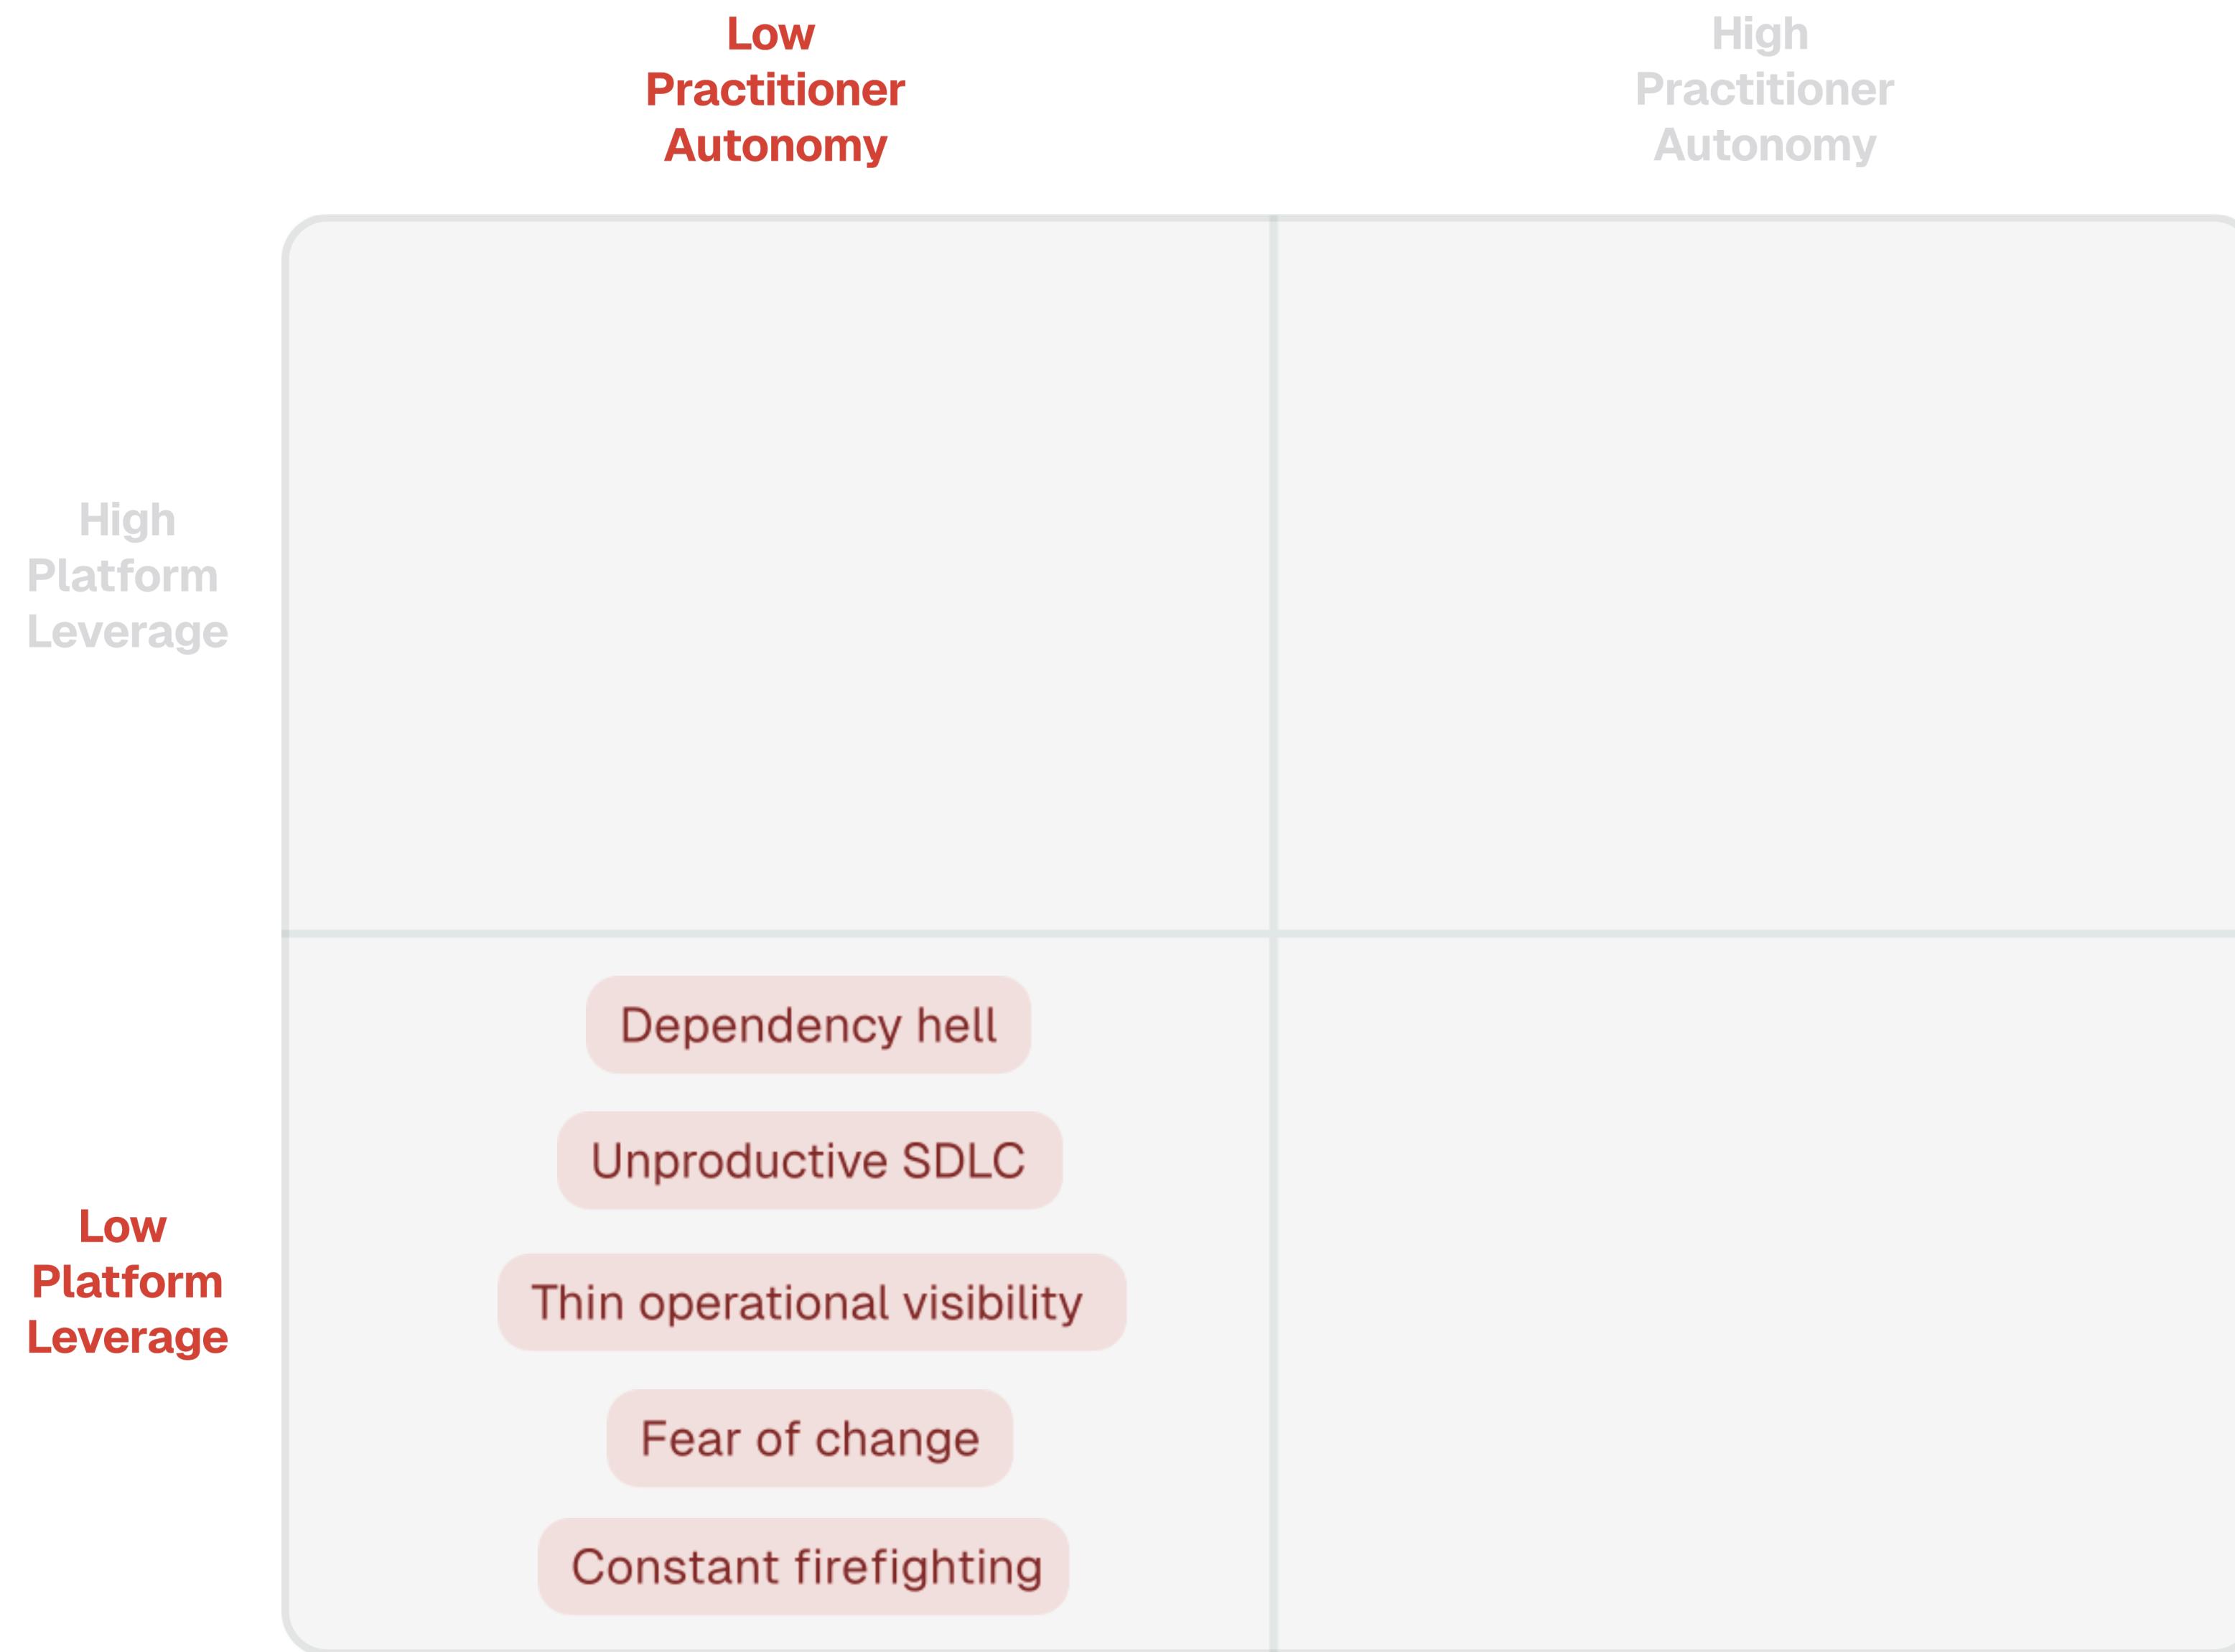

# Leverage

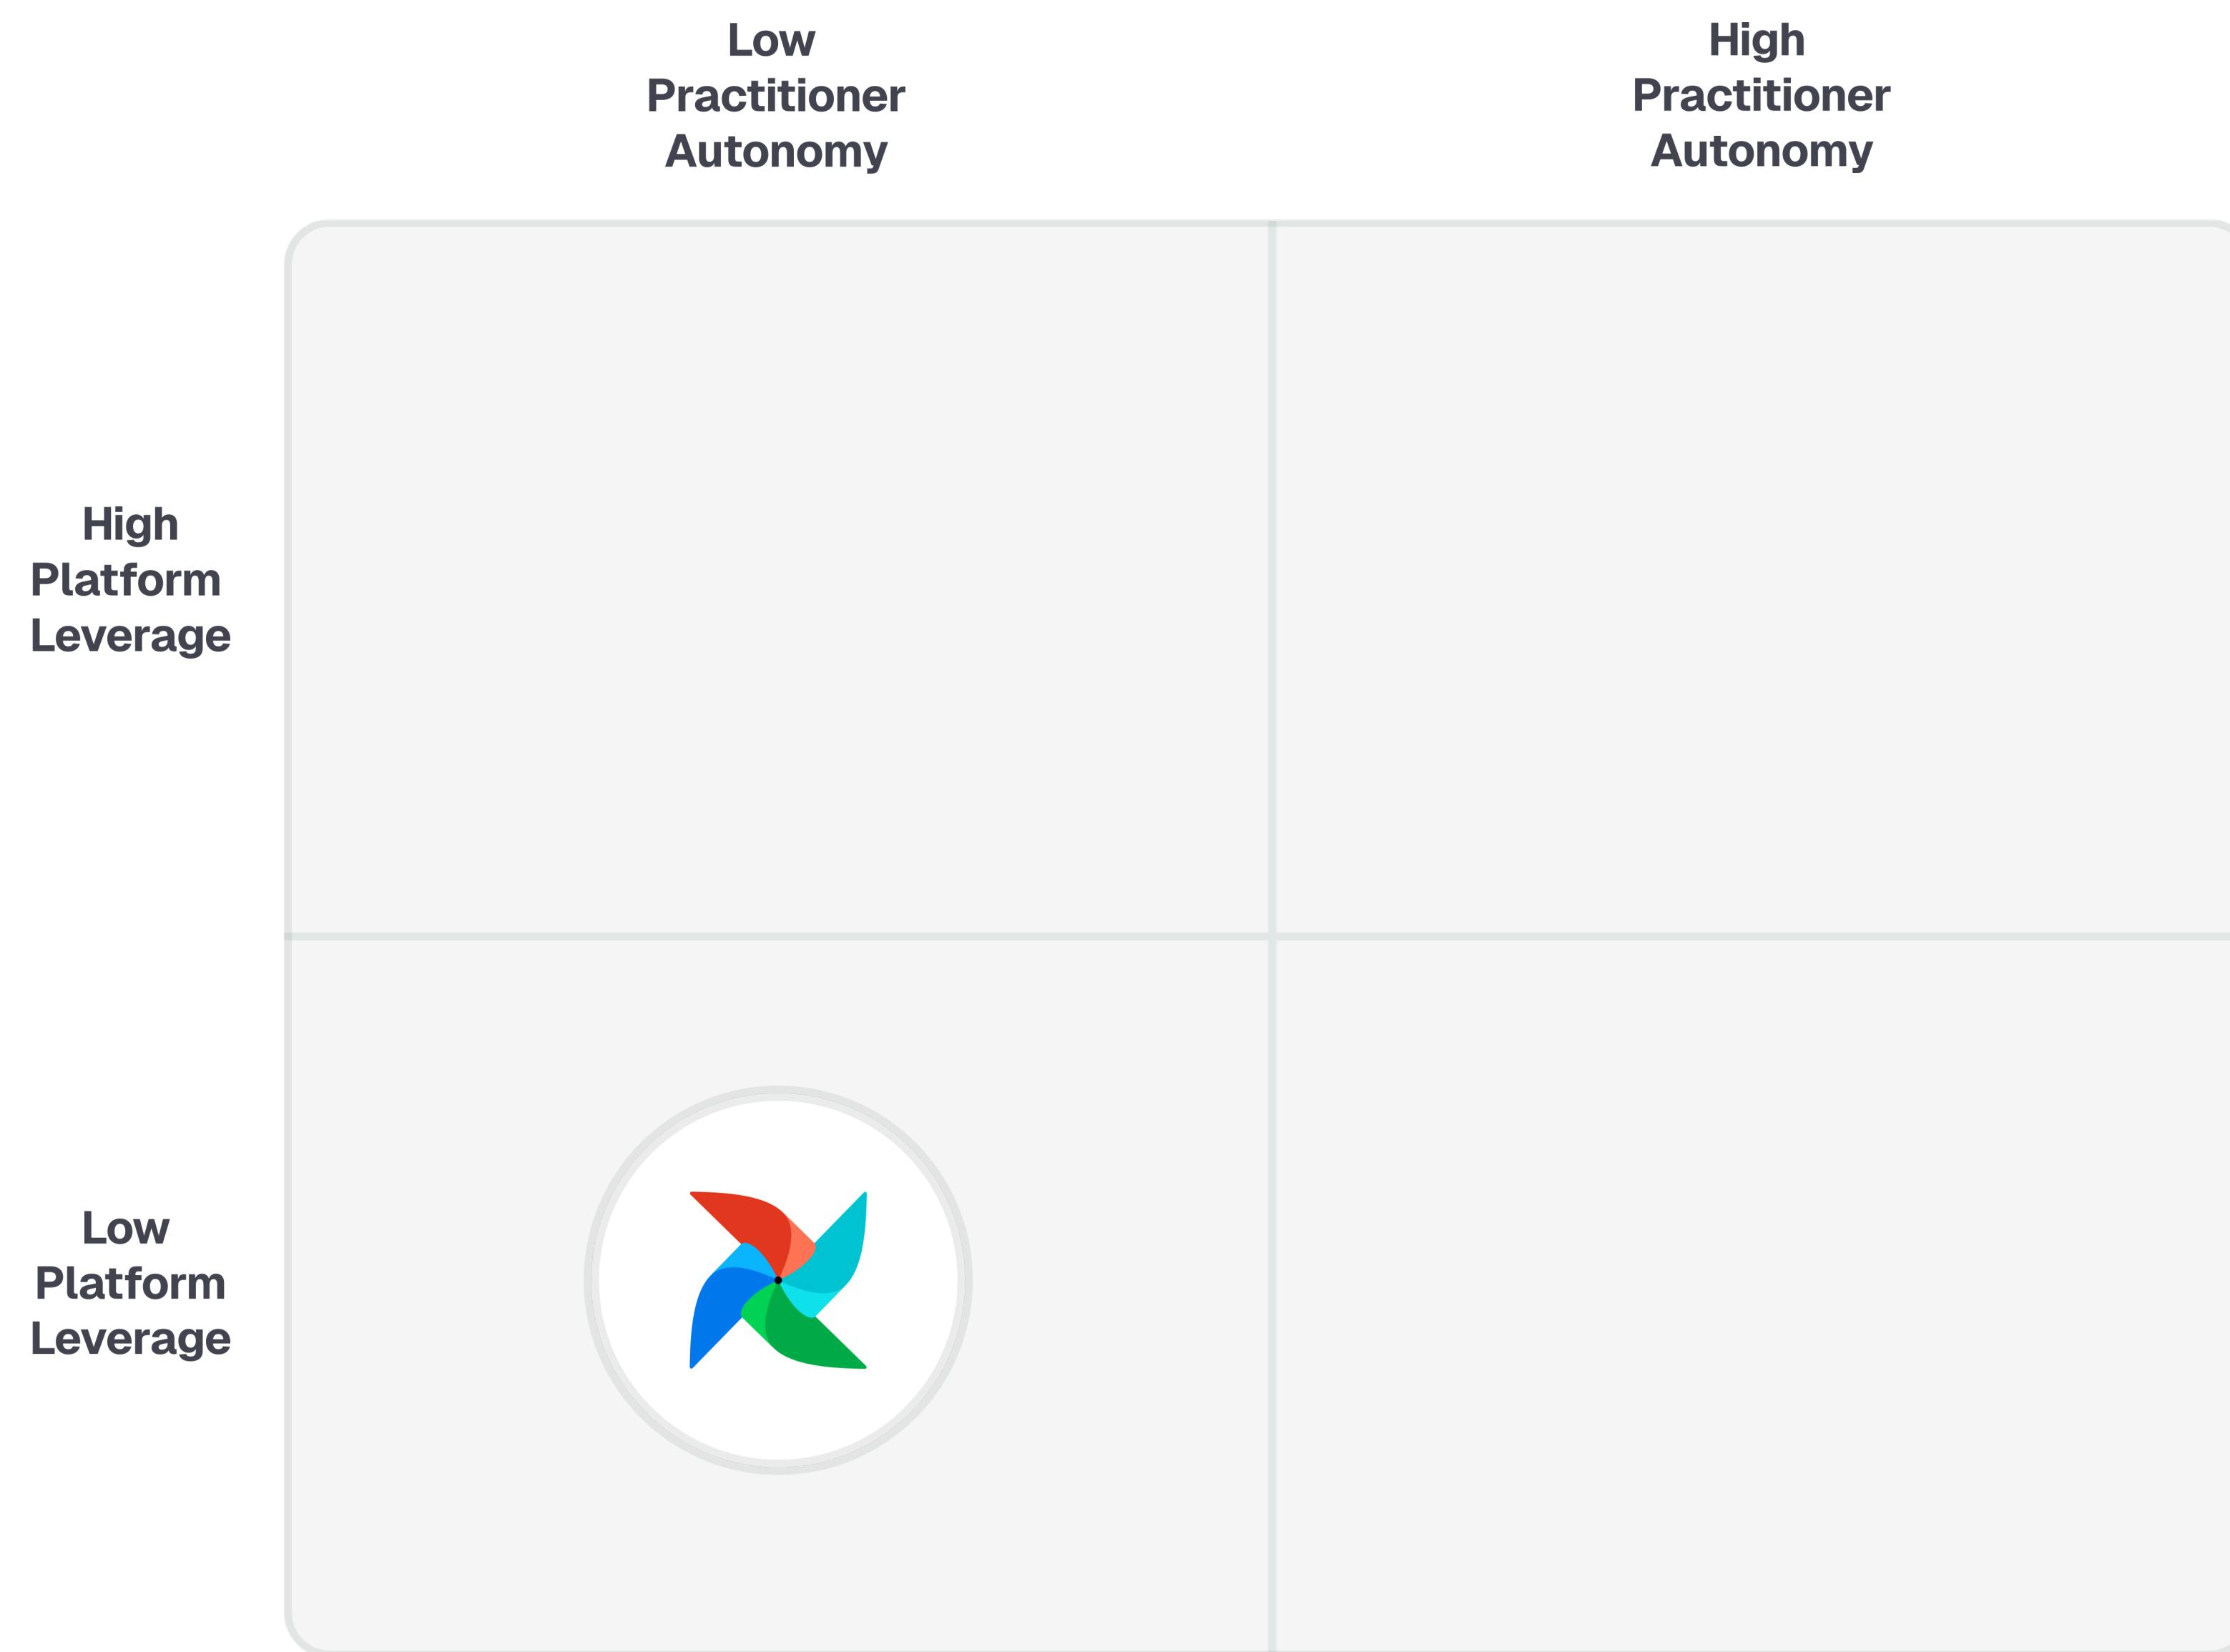

- ✅ Ensure practitioners are self-sufficient and productive
- ⟳ Focus on high-impact, platform-wide improvements
- ↔ Partner with cross-cutting policy teams (finance, compliance)

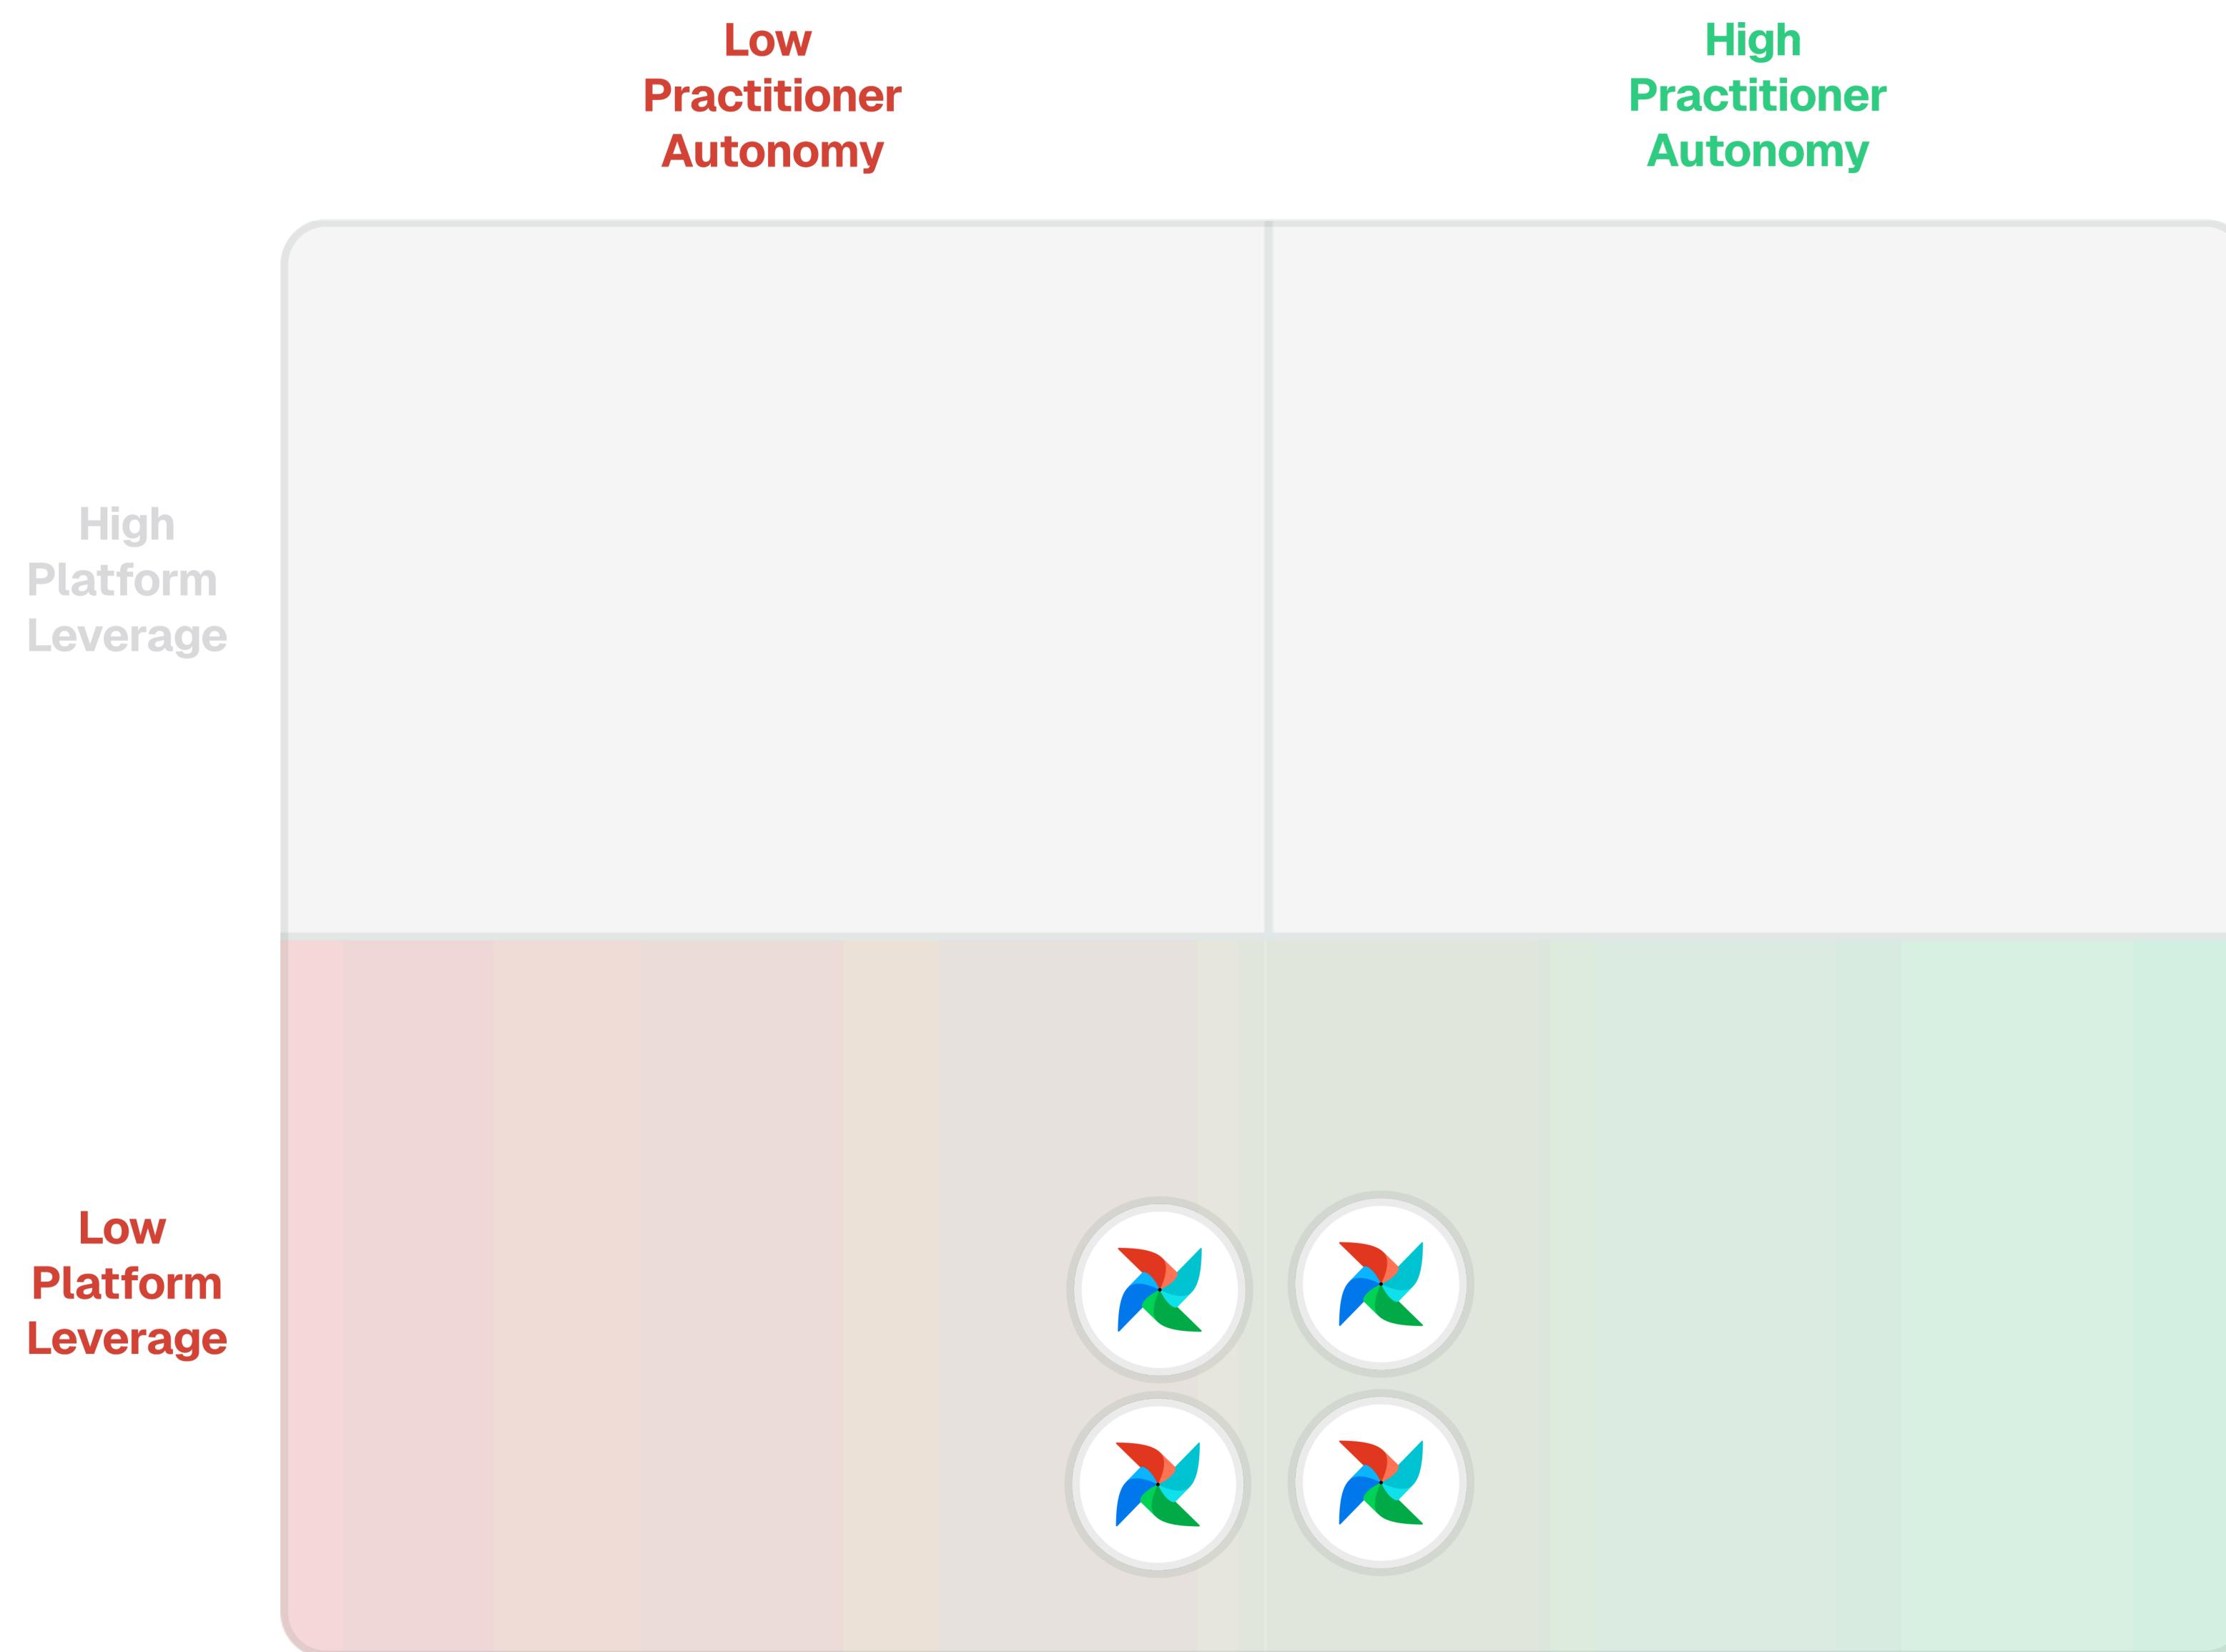

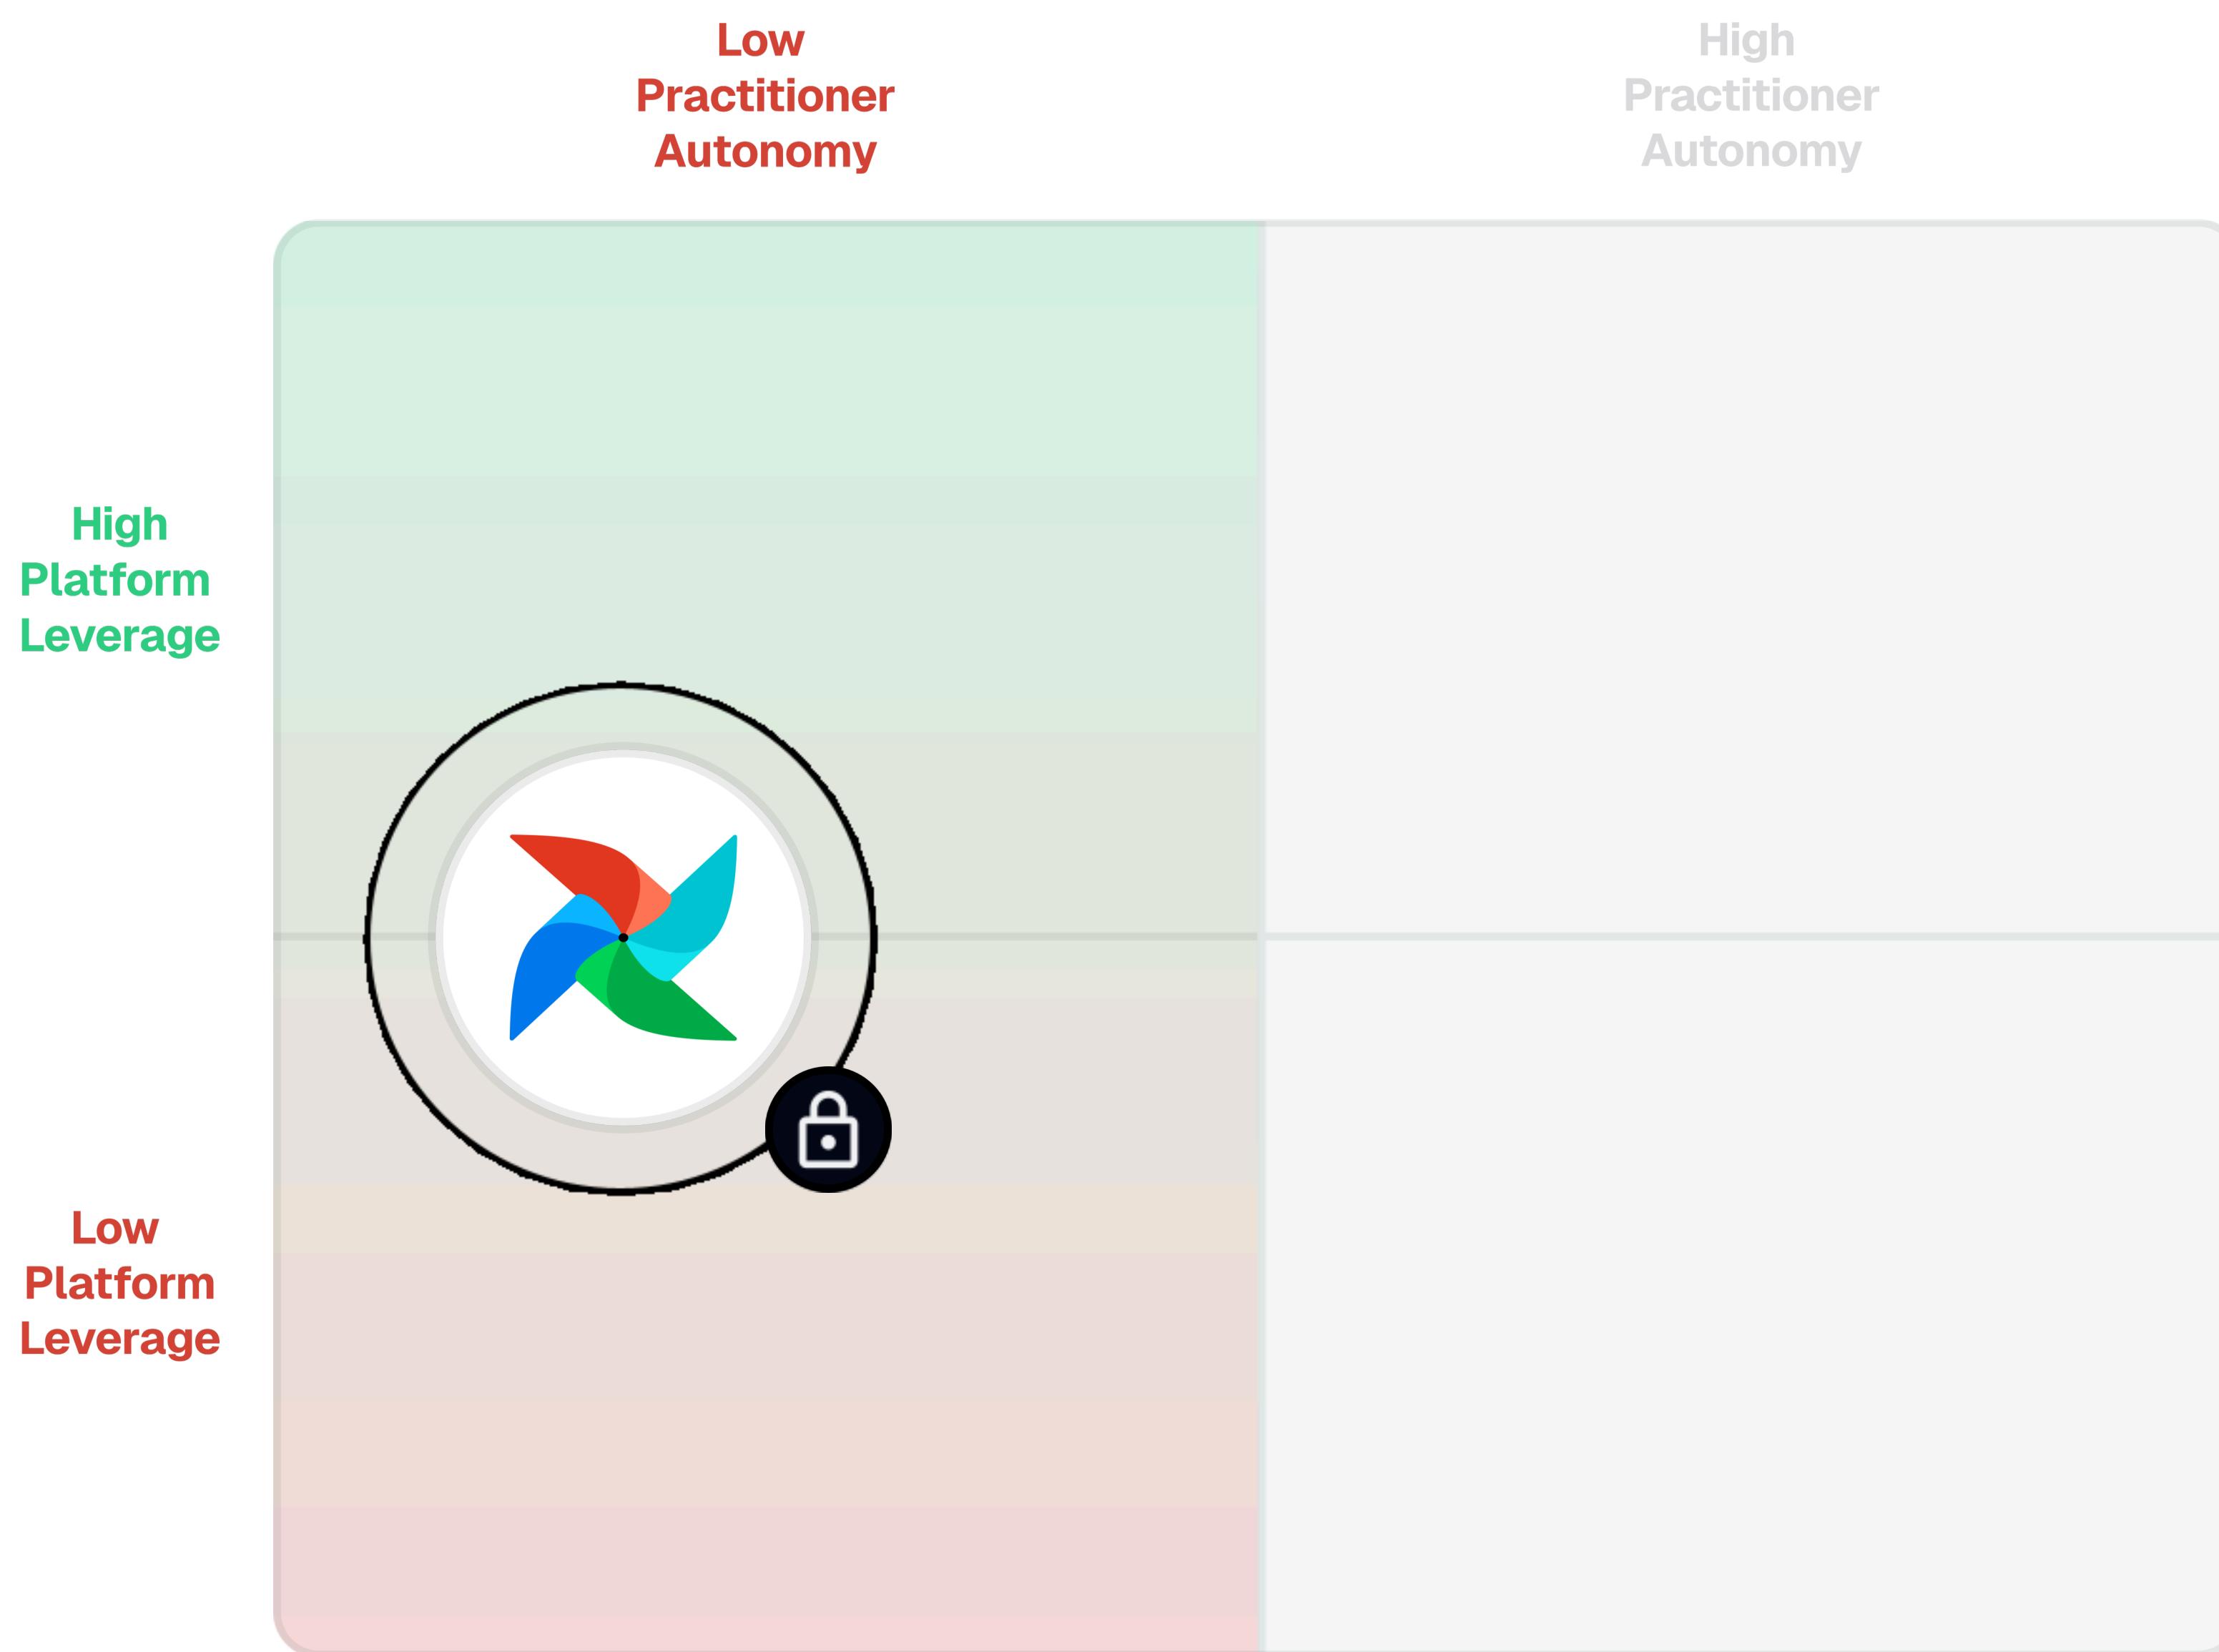

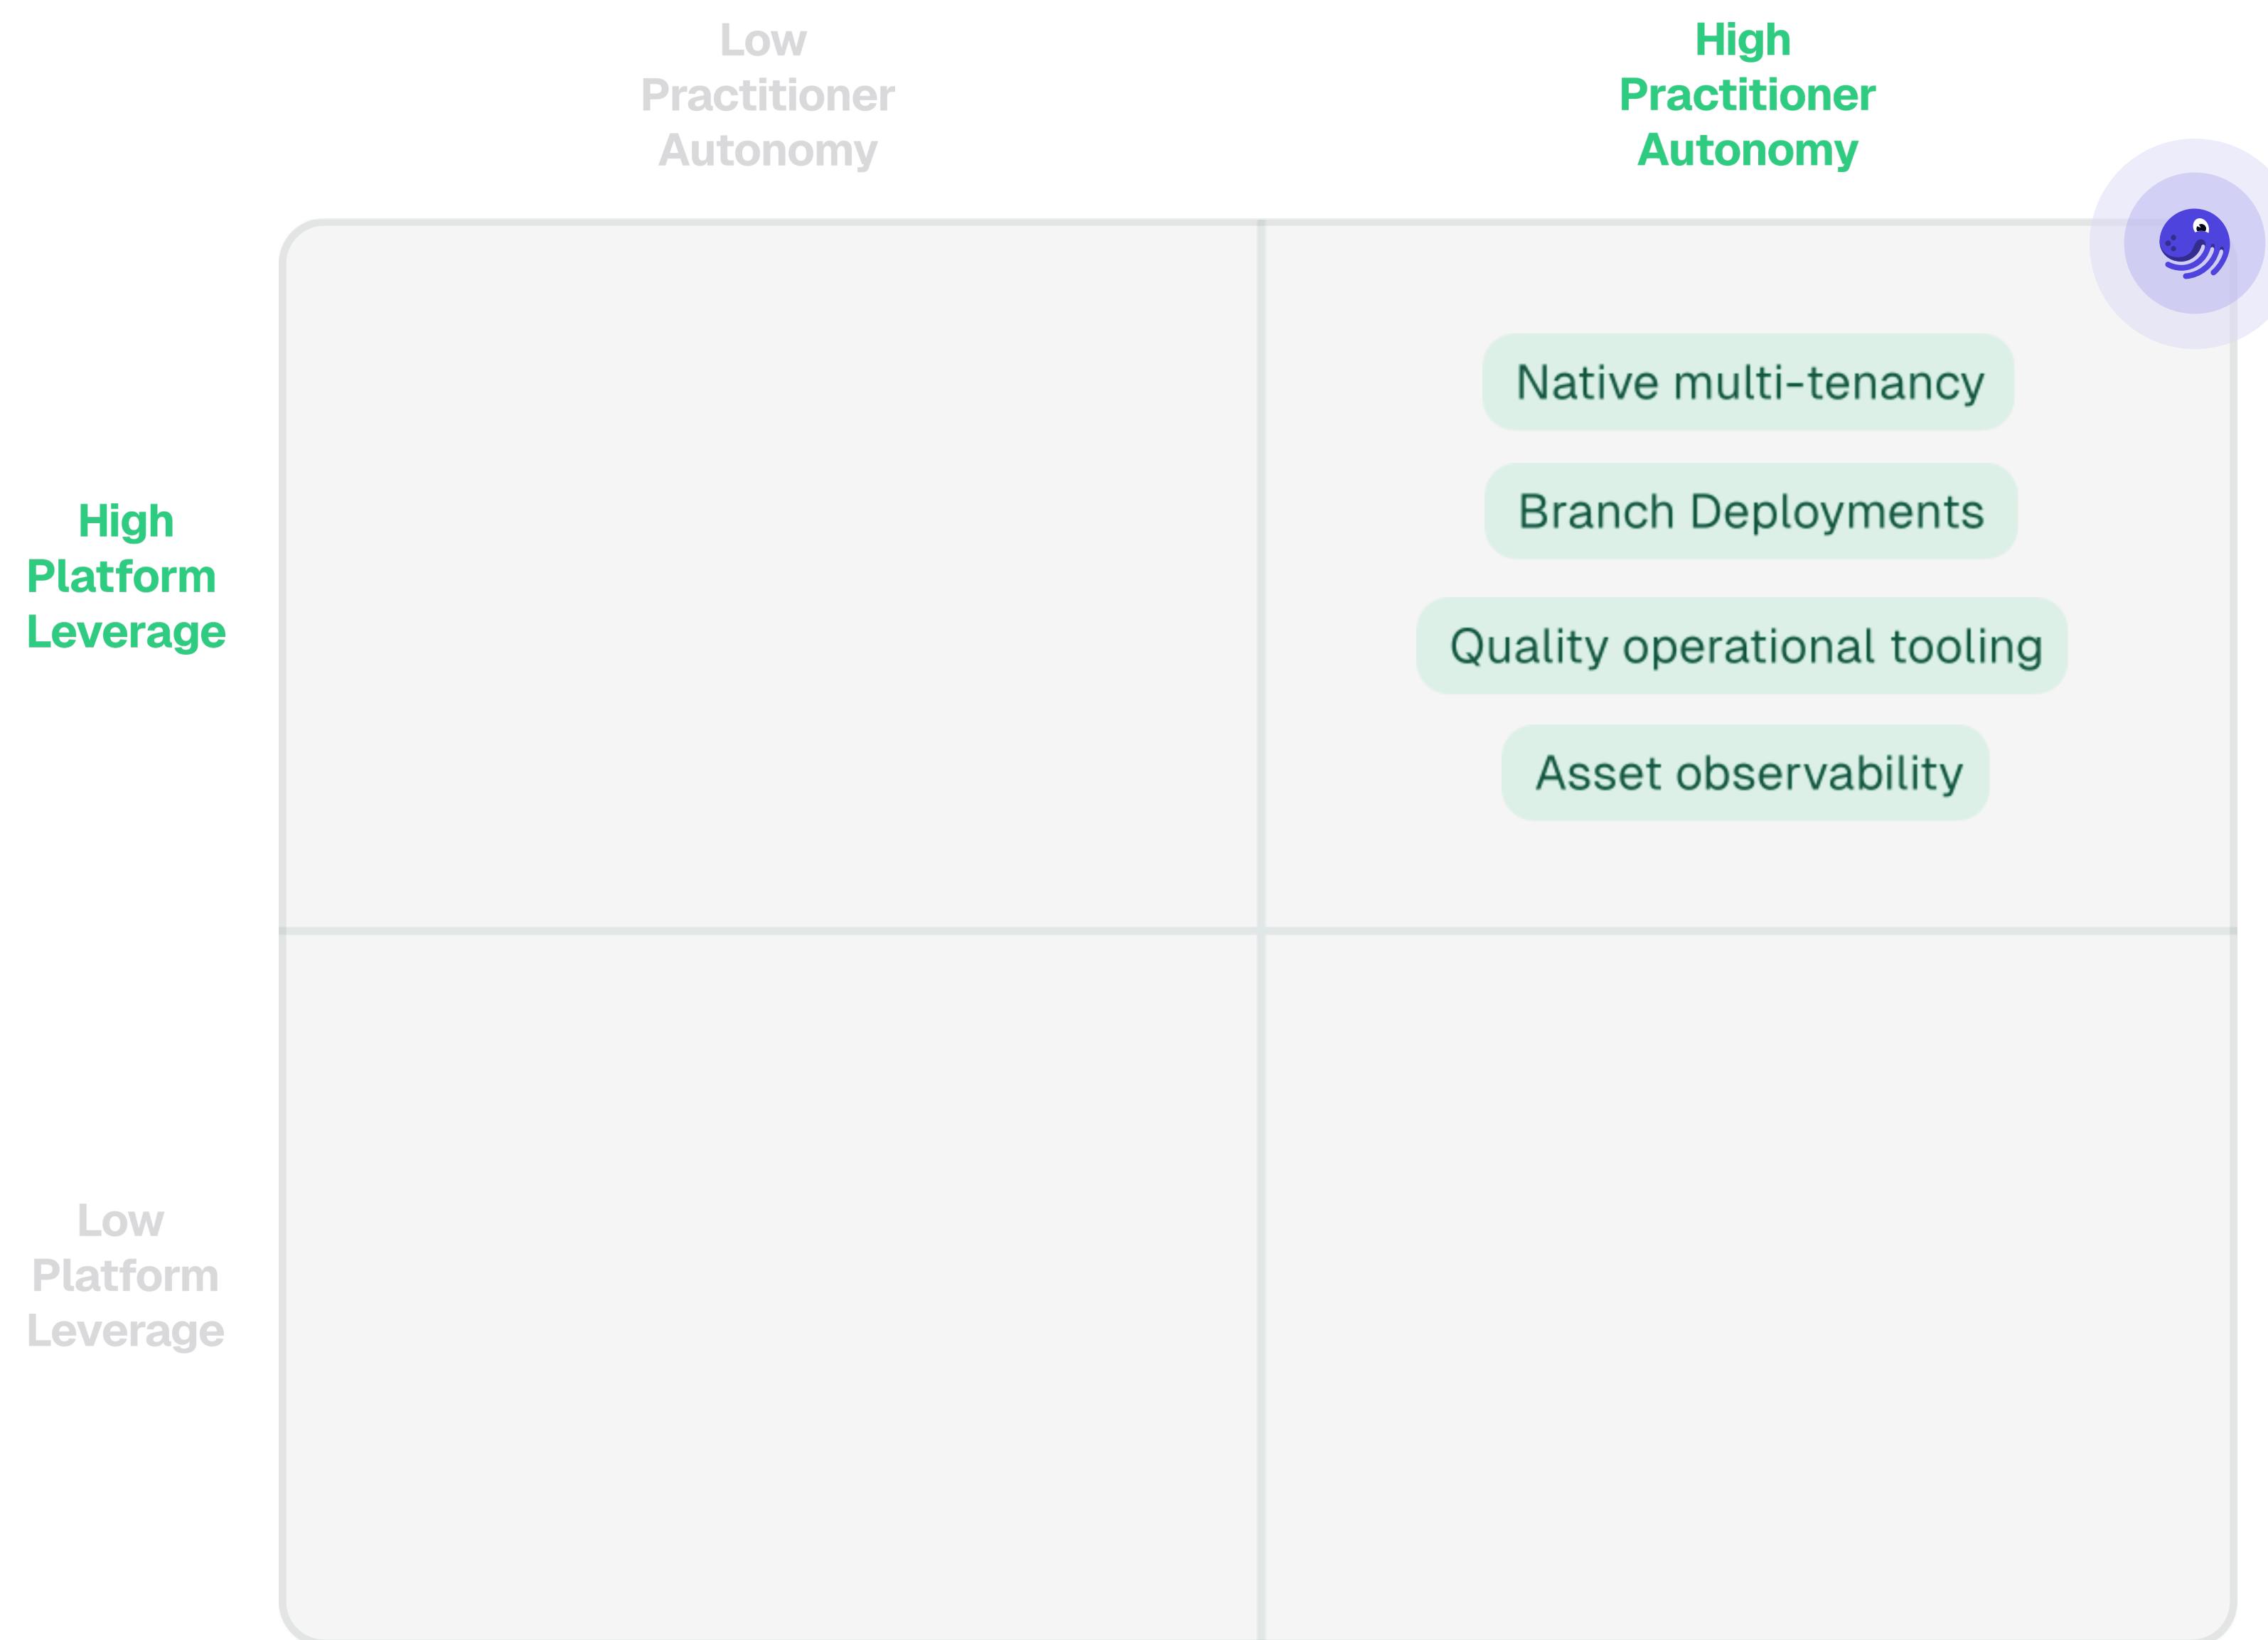

**High  
Platform  
Leverage**

Practitioner  
Autonomy**

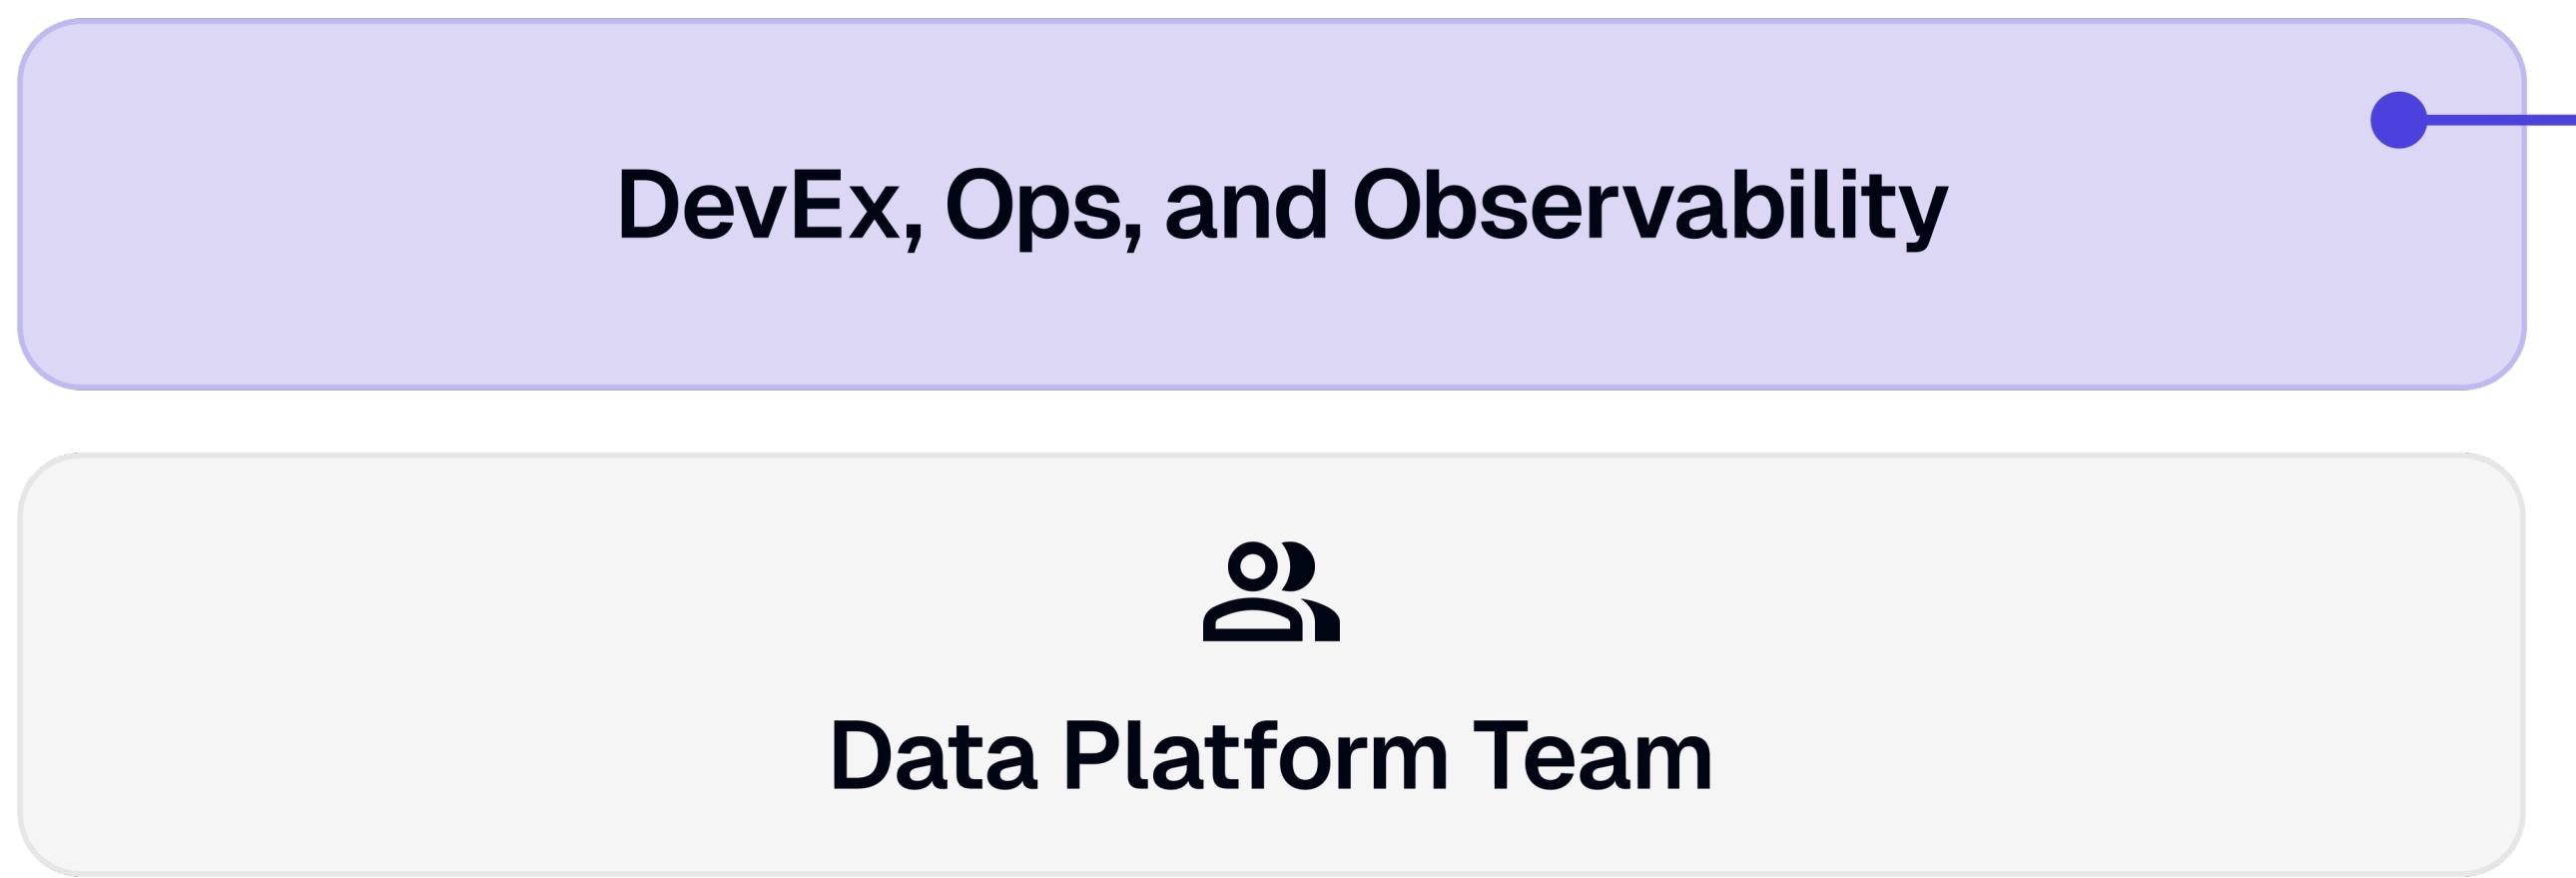

# Organizing the platform

# Organizing the platform

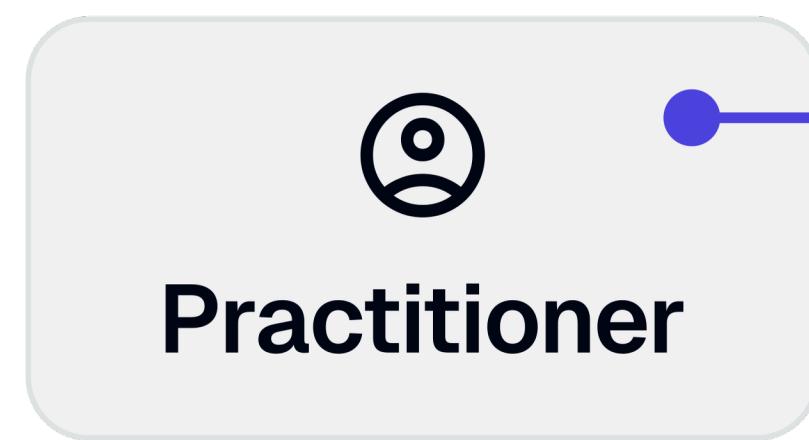

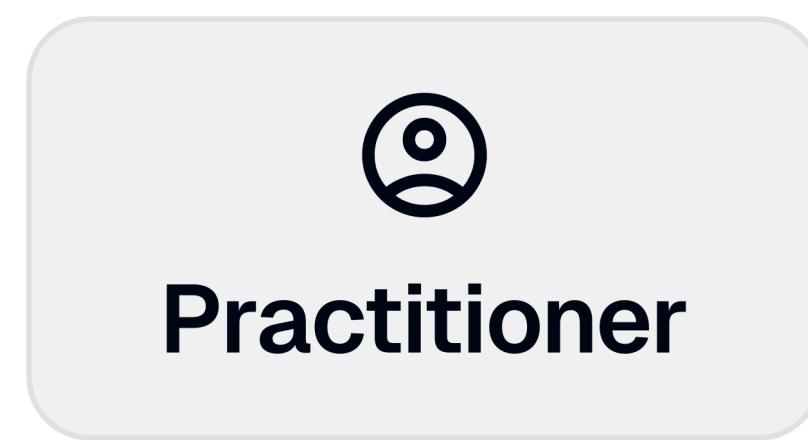

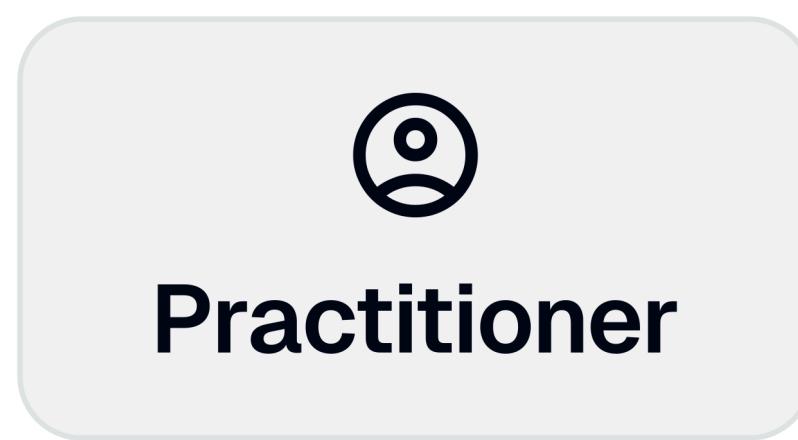

A data platform team managing centralized control plane.

# Organizing the platform

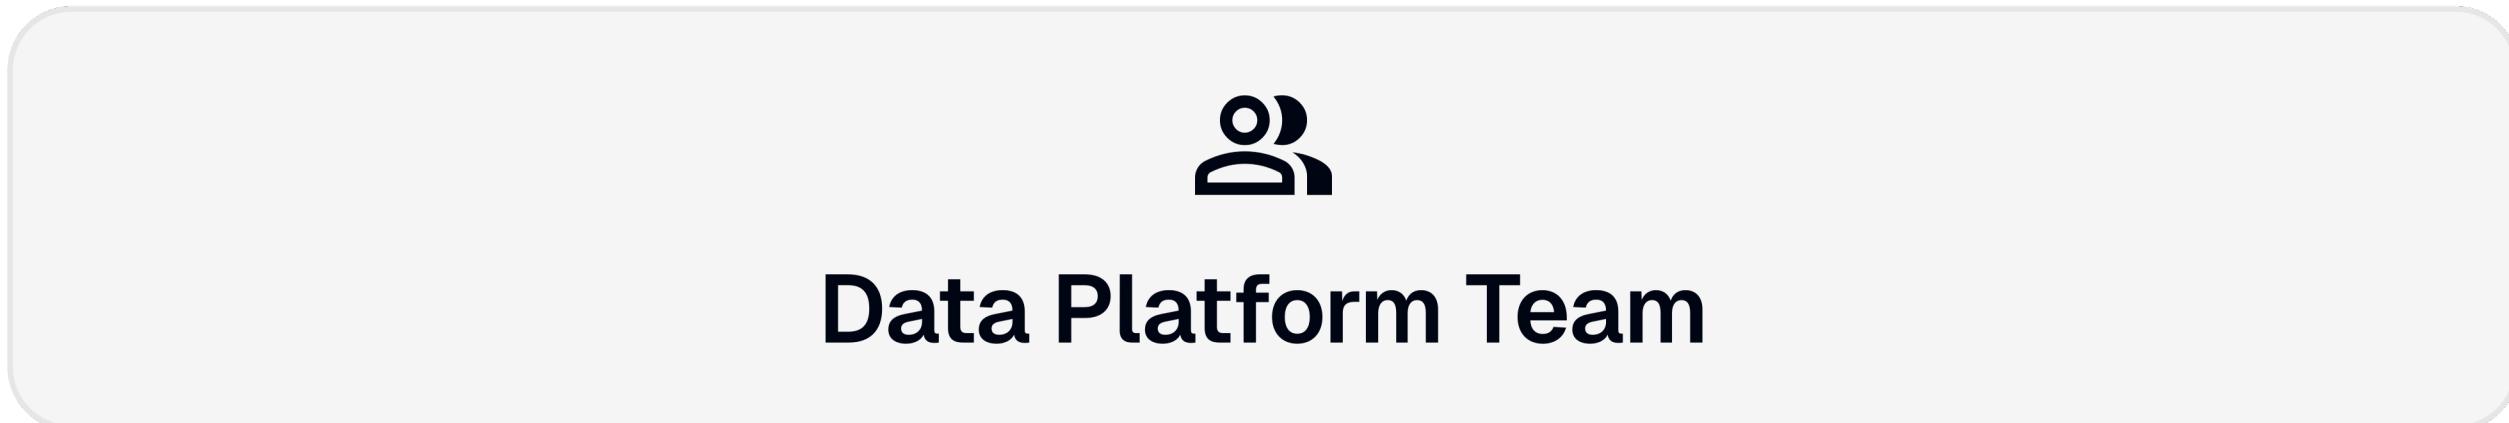

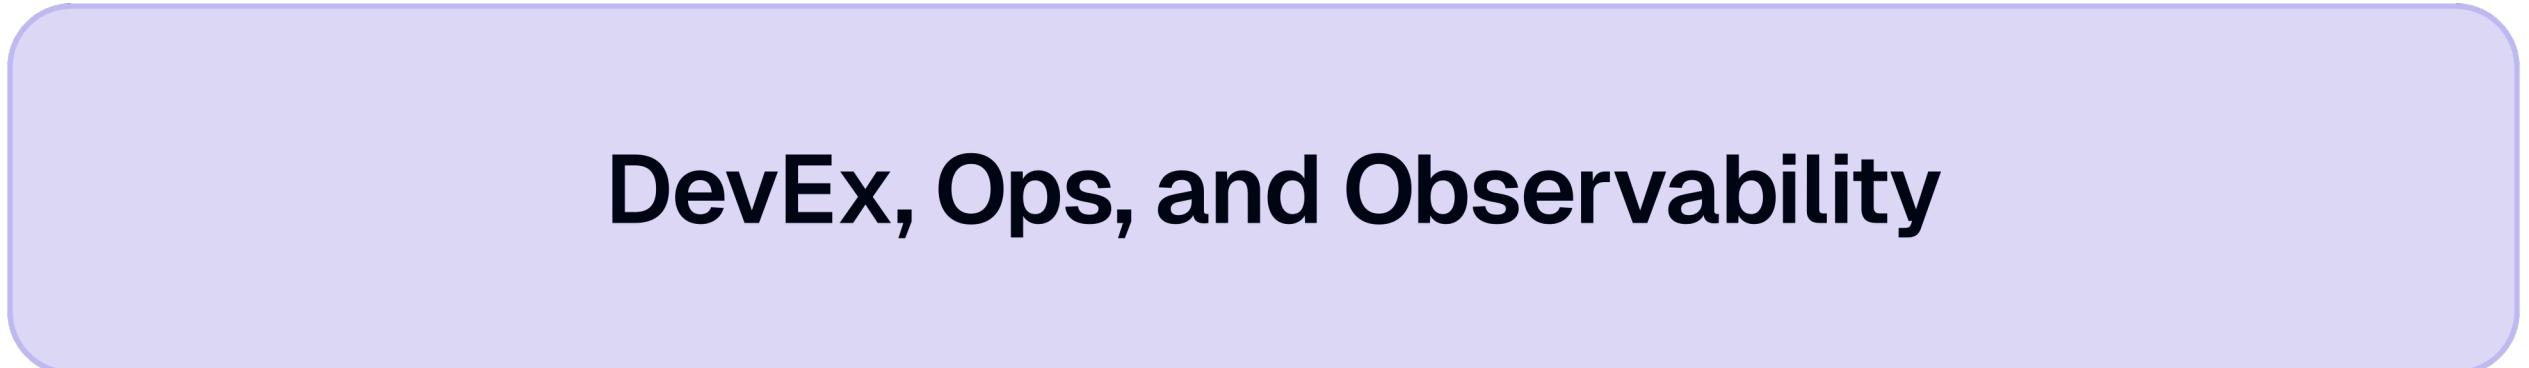

Shared platform with unified DevEx,  
Ops, and Observability.

# Organizing the platform

Every practitioner owns their assets and pipelines with an SDLC.

# Organizing the platform

## Unified Asset Graph

Collectively build a unified system of record for all production data.

## It's your Data Platform

- ✓ Foundational
- ✓ Costly
- ✓ Context-specific

## It's the Control Plane

- ✓ Makes decisions
- ✓ Flexible & Programmable
- ✓ Centralized

## It's a Unified System

- ✓ DX Workflow
- ✓ Operational tools
- ✓ Asset graph

# Thank You
